**Application range**

Schools and Universities

**Type**

Reference

Officially opened in September 2015, the Georgia Tech Engineered Biosystems Building (EBB), is cooled and heated by more than 350 DID631 and DID632 active chilled beams, contributing to the building's energy-efficiency and its LEED® Gold Certification.

Georgia Tech's EBB provides 218,000 square feet of flexible interdisciplinary laboratory space for researchers collaborating in the fields of Chemical Biology, Cell Therapies and Systems Biology. A key design focus was to foster interaction between chemists, engineers, biologists and computational scientists from the College of Engineering and the College of Science.

Construction Manager: McCarthy Building Cos.

Design Team: Cooper Carry and Lake|Flato Architects
